Providing a Pre-Configured and Tested Solution

EdgeReady™ Micro Data Centers Save Merging Credit Unions Time & Money

" By choosing micro data center solutions over individual components, the credit union was able to simplify their deployment process. The pre-configured, fully tested MDCs shipped directly to their final locations ready for installation, saving both time and money. "

Tony Locker
Tripp Lite's Vice President of Product Management,
Enterprise Solutions

EdgeReady™ Micro Data Centers

Customer

This not-for-profit credit union formed in 1995 to serve its members in parts of northeast Illinois and southeast Wisconsin. A recent merger with a nationwide credit union resulted in a financial institution that is a top 100 credit union in the U.S., with branches located in several regions throughout the country.
Challenge

The merger created opportunities for scalable growth and more value for the credit union's members and employees. To help realize synergies, IT equipment for kiosks in branches around the U.S. required standardization. The IT staff found itself facing considerable time and expense traveling to each city to assemble and configure equipment for individual kiosks. The credit union sought an alternative that would enable them to avoid these costly and time-consuming on-site visits to the 70 locations planned for the rollout.

The Tripp Lite Solution

Tripp Lite's EdgeReady Micro Data Center solutions are fully assembled, configured and tested before shipment, enabling rapid deployment for remote or edge-of-network applications. The line includes 40 stock configurations that ship in just three business days. Customized models can ship in as few as five business days.

The credit union worked with its preferred reseller, along with Tripp Lite Channel Account Managers, to identify the ideal solution with remote management capabilities. A customized Tripp Lite EdgeReady MDC configuration was chosen, incorporating the following components:

1U Cantilever Fixed Shelf

Single-Phase PDU

24U Mid-Depth
Rack Enclosure

Extended Runtime
External Battery Pack

2200VA Line-Interactive
Sine Wave UPS

Web Management
Accessory Card

Environmental
Sensor Module

Results

The Tripp Lite Micro Data Center solution enabled shipment of pre-configured, tested and assembled racks directly to locations nationwide. Simple and quick deployment saved the credit union the time and money that would have been required for site visits by their in-house technology staff.

Because the MDC configuration is implemented easily, it can be shipped and deployed to new kiosk locations as the credit union continues to grow.
