

Reliable Tripp Lite UPS Systems Keep Ethiopian Airlines Flying

Ethiopian Airlines is the largest and most profitable airline in Africa. Based at Bole International Airport in Addis Ababa, it operates in an area that routinely experiences blackouts. These interruptions in power corrupt computer operating systems and damage hardware, resulting in lost data and hours of lost productivity. It became essential for Ethiopian Airlines to protect new and existing IT infrastructure from the harmful effects of power problems.

The solution was simple: Install Tripp Lite UPS systems. With battery backup from AVRX750U UPS systems, PCs and switches stay powered during blackouts until a generator can take over. The AVRX750U also provides automatic voltage regulation (AVR) to safeguard hardware from brownouts and overvoltages. This feature regulates incoming power to a normal voltage without draining the battery. Meanwhile, integrated network-grade surge protection prevents power surges from damaging critical equipment. The solid performance of Tripp Lite UPS systems keeps Ethiopian Airlines operating seamlessly, whatever the power problem.
