Steps

The Telnet Console Interface uses a menu-driven, text-based interface. It has most of the same menus and submenus as the Web Console but is arranged differently.

1. Assuming the SMTP network settings and at least one email contact have already been configured, open a telnet client and connect to the IP address of the WEBCARDLX management card.
2. At the login prompt, enter a valid username and password.
3. After a successful login, you will see the telnet console's main menu, which will allow you to choose a patch down the menu structure.
4. Choose the following path from the main menu structure:

2—System Configuration

1—Address Book

1—Email Contacts: type in the number (#) of a configured email contact, then press the enter key.

S—Test Email

A—Apply Changes

5. Confirm receipt of the test email. The test is complete.

Note:

The email contact detail menu will display the current email date/time along with confirmation of whether the email successfully reached the mail server or is still in a pending status.

If additional assistance is required, please contact Tripp Lite Technical Support by email (techsupport@tripplite.com) or phone (773.869.1234). Tech Support is available from 7:00 a.m. to 6:00 p.m. Central time, Monday through Friday.
