Please read this carefully.

Mac OS 8.x-9.x and Classic (OS 9.x running within Mac OS X) Users:

Although the LaserWriter 310 and LaserWriter Select 310 have a serial driver, this driver is not compatible with Mac OS 8.5 and above. Because of this, the printer will not work WITH ANY SERIAL OR PARALLEL product on Mac OS 8.x-9.x or Classic (OS 9.x running within Mac OS X).

Historical Information:

There was a 3rd-party shareware solution that proposed to make the 310 compatible with the Mac OS 8.5 and higher. This software was found at <https://www.quovadimus.cc/serialbridge.html>. Unfortunately, this link is no longer valid.

Mac OS X Users:

Although Keyspan[®] provides serial and parallel port solutions for Mac OS X, Apple[®] has not released any Mac OS X drivers for this printer that would work with parallel or serial ports. Without a driver, you cannot print to this printer.
