### **New Single-Phase UPS Systems Provide Highest Level of Protection in Smallest Amount of Space**

- **Provide pure sine wave power with zero transfer time**
- **Occupy just 1U of rack space**
- **Isolate sensitive equipment from every power problem on the AC line**

**CHICAGO** ... Power management company Eaton announced today its Tripp Lite by Eaton business has introduced SmartOnline® true on-line double-conversion UPS systems that occupy just 1U of space in a rack, leaving room for other equipment in small to medium-sized computer rooms and network closets.

The new 120V UPS systems deliver 1500VA or 2000VA of reliable on-line backup power for the highest level of power protection. On-line double-conversion technology maintains perfect output by converting AC input to DC, then reconverts UPS output to fully regulated sine wave AC power. Zero transfer time to battery mode assures protection for even the most sensitive electronics.

“Previously, this level of power protection was available only with larger UPS systems that take up two or more rack units, limiting available space for critical equipment,” said Sami Hussaini, Product Manager, Online UPS Products. “These new 1U solutions give IT managers attractive options for critical site applications in smaller network closets, such as those frequently found in businesses and schools.”

These new 1U UPS systems contain a host of other features that make them robust backup solutions for servers and switches, phone systems, kiosks, high-end engineering systems and professional AV computer systems.

Five outlets split into two switchable load banks allow for load shedding or rebooting of select components. A front-panel LCD details site power, UPS status and operating data. RS-232 and HID-compliant USB ports connect to a computer running power management software, such as PowerAlert®, which is available as a free download from [tripplite.com](http://tripplite.com). A network card slot accepts an optional HTML5-based WEBCARDLX (sold separately) that enables full remote access. These two new UPS systems are also ENERGY STAR® certified, with an economy mode for enhanced efficiency and reduced BTU output when utility power is of high quality.

### Key Features of Tripp Lite SmartOnline 1U Rack-Mount UPS Systems

*Model: SU2000LCD1U*

- On-line double-conversion operation with pure sine wave output and zero transfer time to battery for critical site applications
- Outlets split into two load segments, enabling prioritized shutdown, remote power cycling and automated restart protocols
- Front-panel LCD for local monitoring, plus RS-232 and USB ports for connecting to a computer running power management software
- Network card slot for optional remote monitoring
- ENERGY STAR certification
