

Remote Control for FrontRow

MODEL NUMBER: ER-RF1

Description

The RF Remote Control for Front Row is a sleek and powerful RF remote control designed specifically for use with Apple's Front Row multimedia software. It provides more range, convenience and flexibility than infrared remotes.

Features

- **Range:** The RF Remote for Front Row provides a range of 60 feet or more (about twice the distance of infrared remotes).
- **Convenience:** Unlike an infrared remote, this RF remote does not require line of sight to the receiver. This allows you to manage Front Row from more areas within the room or even from other areas of your house.
- **Flexibility:** Since the RF signal works through walls and furniture, you have more flexibility in locating the Macintosh that will be used to run Front Row. For example, you can place a Mac mini inside an entertainment center cabinet or within an AV closet and still easily control Front Row with the remote.
