New Security Policies for LX Platform Devices

TRIPP·LITE

As of firmware version 15.5.7, PowerAlert® Device Manager (PADM) applies the following security policies:

• On initial login with any of the pre-configured Local Users – **localadmin**, **localmanager** or **localguest** – PADM will force the user to change the default password.

• The default passwords **localadmin**, **localmanager** and **localguest** are restricted and cannot be used for any user.

• The preconfigured SNMPv1 and SNMPv2 users – **public** and **tripplite**, respectively – are disabled by default. Note that PowerAlert Network Management System (PANMS) and PowerAlert Network Shutdown Agent (PANSA) will not discover devices until SNMPv2 user **tripplite** is enabled.

• The default password of the pre-configured SNMPv3 users – **localadmin**, **localmanager** or **localguest** – must be changed prior to use. Note that the new entry will be saved as both the authentication and privacy passwords.

• If the Administrator (with new password) navigates to Configuration > Security > User and saves any edits on the page, a warning message will appear about changing the Password and Auth Password for **localmanager** and **localguest**.

For questions regarding SNMP management of your Tripp Lite device, contact Tripp Lite Tech Support at 773.869.1234 (7am – 6pm CST).
