

Power protection solutions for data storage

Today's rapidly expanding requirements for data storage, where data is now commonly measured in terabytes rather than gigabytes, continue to push growth within IT infrastructures.

Not only do information technology (IT) managers have to be prepared for growth, but also must ensure their critical data is protected. It is vital to include network storage devices on the list of hardware that requires backup power protection. Without it, a business's most valuable commodity is completely exposed to corruption or total loss. Eaton® power protection, distribution and management solutions give IT managers peace of mind that their data storage is protected by the best in the industry.

Solution highlights >

Partnership

- Eaton collaborates with NetApp to bring the first commercially available power management software to integrate into the NetApp Data ONTAP® operating system, providing the ability to monitor and manage NetApp fabric-attached storage systems and facilitate graceful shutdowns to protect data integrity when power is compromised

Flexible configuration

- With extended battery runtime options, hot-swappable batteries, internal bypass, and optional maintenance bypass, Eaton solutions maximize availability
- Eaton's Intelligent Power Manager™ (IPM) software uses a simple dashboard display that seamlessly integrates into VMware® and Citrix® platforms
- This added functionality allows users to easily automate the ability to move, consolidate or suspend virtual machines in the event of a power disruption
